

Keeping everyone safe when visiting maternity

What we're doing:

Staff wear the right PPE for every task. That includes masks, aprons and gloves

Hand sanitiser is available around the maternity department

Staff who have COVID symptoms are required to isolate and get tested

Keeping in touch with the women in our care about any changes to services

What you can do:

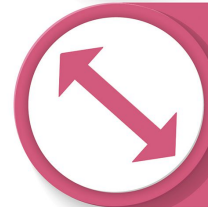

If you're a birth partner and have any symptoms of COVID or are isolating, please **do not** come to the hospital

Please wear a mask in all areas, including scan rooms

Please wash your hands regularly and use the sanitiser available after touching things like door handles

Keep your distance from staff and other people in the hospital and avoid going to other areas of the hospital outside of maternity

Above all, be kind and respectful to the maternity team: they're here to help you and your baby stay safe
